GitHub: github.com/mfahadrehan

PROFESSIONAL SUMMARY

Results-oriented Machine Learning Engineer with proven expertise in developing, optimizing, and deploying AI/ML models into production. Proficient in PyTorch, Scikit-learn, and NLP, with hands-on experience building predictive algorithms, multimodal diagnostic systems, and LLM-powered RAG applications. Strong foundation in data engineering, automated scraping pipelines, and scalable Python architectures.

TECHNICAL SKILLS

- **Machine Learning & AI:** PyTorch, Scikit-learn, XGBoost, LightGBM, ResNet50, Transfer Learning, Explainable AI (SHAP, Grad-CAM)
- **Data & NLP:** Natural Language Processing (NLP), SMOTE, Llama-3, RAG Architecture, Pinecone Vector DB, Data Scraping
- **Backend & Deployment:** Python, FastAPI, Flask, Django REST, Docker, Git, Render, REST API Integration
- **Software Development:** PostgreSQL, Prisma ORM, Selenium, Browser Automation, Node.js, React 18

PROFESSIONAL EXPERIENCE

AI / ML Engineering Intern

May 2025 – Jul 2025

DevelopersHub Corporation | Lahore

- Architected and deployed machine learning pipelines for fake news detection, achieving 93% accuracy, alongside clustering algorithms for customer segmentation and sentiment analysis.
- Addressed high data imbalance in real-world datasets utilizing SMOTE and advanced class-weighting techniques to optimize model precision and recall.
- Deployed predictive models to production using Flask and Streamlit interfaces, hosted on Render, ensuring robust version control through Git/GitHub.

Software Engineer Intern (Automation & Data Pipelines)

Feb 2026 – May 2026

Bitbash / Inertia | Lahore

- Developed a real-time Crypto Surveillance System utilizing Next.js and PostgreSQL, implementing automated data-fetching algorithms to detect flash crashes and trigger instant price alerts.
- Engineered highly resilient data-scraping pipelines, building a Python-based Discord bot that bypassed Cloudflare restrictions via TLS fingerprint spoofing to extract Upwork job data.
- Built an automated execution agent via WebSocket integrations, interfacing a FastAPI Python backend with an Android APK to handle high-concurrency actions.

TECHNICAL PROJECTS

ImmunoAI – Multimodal AI Diagnostic System

2025 – 2026

Academic Final Year Project

- Co-developed a multimodal Clinical Decision Support System (CDSS) for rare autoimmune diseases, training models on 80K+ generated synthetic medical records.
- Engineered a high-accuracy stacking ensemble (Random Forest, XGBoost, LightGBM, LR meta-learner) achieving an ROC-AUC of 0.8617 and a 93% fusion model accuracy.
- Implemented ResNet50 transfer learning on MRI scans, integrating Grad-CAM heatmaps and SHAP values to provide model explainability to medical professionals.
- Deployed an LLM-powered RAG chatbot utilizing Llama-3 and Pinecone, integrated into a scalable Django REST backend with automated diagnostic report generation.

EDUCATION

Bachelor of Science in Software Engineering (BSSE)

Oct 2022 – Jun 2026

Lahore Garrison University | 1st Division

Intermediate in Computer Science (ICS)

Sep 2020 – Mar 2022

Govt. Islamia College, Civil Lines, Lahore | 1st Division

Matriculation (Science)

2018 – 2020

Eden Rose The School System, Lahore | 1st Division

AWARDS

Best Award in AI & Machine Learning | DevelopersHub Corporation (May 2025 – Jul 2025)

Awarded for engineering highly accurate data models and successfully deploying them to live cloud environments.
